

Indoor 802.11ax Wi-Fi 6 Dual band high-performance in-wall Gigabit wireless access point

QUICK OVERVIEW

AIR-WAP605-AX1 is a dual-band high-performance in-wall gigabit wireless access point device based on the 802.11ax standard launched by AIRPRO, it could offer maximum 1775Mbps access rate. AIR-WAP605-AX1 works in the 2.4GHz and 5GHz frequency bands and supports advanced wireless technologies such as MU-MIMO, OFDMA, spatial multiplexing, and TWT. The first radio of AIR-WAP605-AX1 works in the 2.4GHz frequency band and can provide a maximum access rate of 575Mbps; the second radio works in the 5GHz frequency band and can provide a maximum access rate of up to 1200Mbps.

FEATURES

802.11ax Wi-Fi 6 wireless in-wall access point:

AIR-WAP605-AX1 supports the 802.11ax standard, operates in both 2.4 GHz and 5 GHz band, and provides an access bandwidth up to 1775 Mbps. This model is a high-end in-wall access point for hotel, education, government and business networks.

Wired and wireless gigabit access:

AIR-WAP605-AX1 integrated gigabit wired uplink port, can truly meet the bandwidth requirement of wireless clients.

Easy to deploy x86 standard panel:

AIR-WAP605-AX1 panel supports 86 box standards, and can perfectly fit plug-in installed to any standard panel, With the use of the PoE cable, the whole installation will be low cost, no noise, short period (the time to install an APis less than 3 minutes).

Downlink Port:

AIR-WAP605-AX1 provides one gigabit downlink port for the accessing of wired devices, which improves the flexibility of networking deployment.

Good PoE compatibility:

AIR-WAP605-AX1 can work well with all PoE switch (cisco, HUAWEI, juniper,AirPro etc.) which support 802.3at standard, this allows to power up AIR-WAP605-AX1 directly, power adapter is not required anymore.

Dual-mode fit & fat:

AIR-WAP605-AX1 can work in fit or fat mode and can flexibly switch between the fit mode and the fat mode according to network planning requirements.

TECHNICAL SPECIFICATIONS

TECHNICAL SPECIFICATION	10	
HARDWARE FEATURES		
Dimensions (L*W*D) (mm)	86 x 86 x 51.8	
Uplink Port	1* 10/100 /1000Base-T (PoE)	
Downlink port	1* 10/100 /1000Base-T

TECHNICAL SPECIFICATIONS

HARDWARE FEATURES		
	Encryption	64/128 WEP, TKIP, and CCMP encryption
	802.11i	Yes
	Portal authentication	Yes
	WAPI	Yes
	MAC address authentication	Yes
	LDAP authentication	Yes
	PEAP authentication	Yes
	WIDS/WIPS	Yes
	Protection against DoS attacks	Anti-DoS for wireless management packets
	Forwarding security	Frame filtering, white list, static blacklist,
	Torwarding security	and dynamic blacklist
	User isolation	AP L2 forwarding suppression
Conveit	Oser Isolation	
Security	D : 1: CCID 11: 11: 11:	Isolation between client
	Periodic SSID enabling and disabling	Yes
	Access control of free resources	Yes
	Wireless SAVI	Yes
	ACL	Access control of various data packets such
		as MAC, IPv4, and IPv6 packets
	Secure access control of APs	Secure access control of APs, such as MAC
		authentication, password authentication, or
		digital certificate authentication between an
		AP and an AC
	802.11W	Yes, encryption of management frames
	IP address setting	Static IP address configuration or dynamic
		DHCP address allocation
	IPv6 forwarding	Yes
	IPv6 portal	Yes
Forwarding	Local forwarding	Yes
Torwarding	Multicast	IGMP snooping
		Yes
	Roaming	
	AP switching reference	Signal strength, bit error rate, RSSI, S/N,
		whether neighboring APs are normally
		operating, etc.
	WMM	Yes
	Priority mapping	Ethernet port 802.1P identification and
		marking
		Mapping from wireless priorities to wired
		priorities
	QoS policy mapping	Mapping of different SSIDs/VLANs to
		different QoS policies
		Mapping of data streams that match with
		different packet fields to different QoS
		policies
		'
	L2-L4 packet filtering and flow classification	Yes: MAC, IPv4, and IPv6 packets
OoS	L2-L4 packet filtering and flow classification Load balancing	Yes: MAC, IPv4, and IPv6 packets Load balancing based on the number of users
QoS	L2-L4 packet filtering and flow classification Load balancing	Load balancing based on the number of users
QoS	_	Load balancing based on the number of users Load balancing based on user traffic
QoS	Load balancing	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands
QoS	_	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs
QoS	Load balancing	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs
QoS	Load balancing	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals
QoS	Load balancing	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals Bandwidth limit based on specific data
QoS	Load balancing Bandwidth limit	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals Bandwidth limit based on specific data streams
QoS	Load balancing Bandwidth limit Call admission control (CAC)	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals Bandwidth limit based on specific data
QoS	Load balancing Bandwidth limit Call admission control (CAC) Power saving mode	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals Bandwidth limit based on specific data streams
QoS	Load balancing Bandwidth limit Call admission control (CAC) Power saving mode Automatic emergency mechanism of APs	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals Bandwidth limit based on specific data streams CAC based on the number of users
QoS	Load balancing Bandwidth limit Call admission control (CAC) Power saving mode	Load balancing based on the number of users Load balancing based on user traffic Load balancing based on frequency bands Bandwidth limit based on APs Bandwidth limit based on SSIDs Bandwidth limit based on terminals Bandwidth limit based on specific data streams CAC based on the number of users Yes

	Network management	Centralized management through an AC;
		both fit and fat modes
	Maintenance mode	Both local and remote maintenance
Management	Log function	Local logs, Syslog, and log file export
	Alarm	Yes
	Fault detection	Yes
	Statistics	Yes
	Switching between the fat and fit modes	An AP working in fit mode can switch to the
		fat mode through a wireless AC;
		An AP working in fat mode can switch to the
		fit mode through a local control port or
		Telnet.
	Remote probe analysis	Yes
	Watchdog	Yes
	Value added marketing	Support: various apps based on intelligent
		terminals, advertising push based on
Value added service		location, personalized push of portals
	Value added authentication	WeChat, SMS, QR code
	Passenger flow analysis	Yes

AIR-WAP605-AX1

Dormitory room

- 802.11a/b/g/n/ac/ax
- High performance, 1775Mbps
- 802.3 at PoE
- X86 standard, easy installation
- Multiple gigabit downlink port

ORDER INFORMATION

Product	Description	
AIR-WAP605-AX1	AIRPRO Indoor Wi-Fi 6 AP, 802.11a/b/g/n/ac/ax supported (2.4GHz:2*2, 5GHz 2*2),	
	max 1775Mbps access rate, fat & fit, 802.3 at, managed by AIRPRO hardware controller	
	& cloud platform.
